Portfolio: richardyang1309-web.github.io/richardyang-portfolio | Domicile: Jakarta, Indonesia

Industrial Engineering student at BINUS University who turns data and work processes into decisions that save cost and time. Experienced in production planning, factory layout, ergonomic product design, and data analysis, with a focus on delivering clear business value. Eager to contribute in teams, skilled in event administration, and able to present analysis clearly to non-technical stakeholders. Interested in Business Analysis, Operations, and Supply Chain.

Keywords: Business Analysis, Production Planning, MPS & MRP, Demand Forecasting, Inventory Control, Kanban, Facility Layout, Business Process Mapping, Service Blueprint, Data Analysis, Ergonomics, Excel, Python, RStudio, LINGO

Education

Bina Nusantara University (BINUS University) - Jakarta Sep 2024 - Sep 2028
Bachelor of Industrial Engineering, 3.56/4.00

- Streaming: Service System Engineering
- Focus: process optimization, supply chain, production planning, and business process mapping

Organizational Experience

Industrial Engineering Student Association (HIMTRI) May 2026 - May 2027
Staff of Research Division | Best Staff of Research, Q1

- Managed and curated relevant competitions so more students joined without having to search on their own.
- Distributed regular competition updates to all department students so no opportunity was missed.
- Assessed students research interests to help the association plan relevant programs.

LDK-CP, Industrial Engineering Student Association (HIMTRI) May 2026 - Jul 2026
Secretary

- Managed permits, proposals, and official letters early so the event ran without administrative delays.
- Turned meeting decisions into clear follow-ups that kept the committee on schedule.
- Kept the committee, association leaders, and university aligned, avoiding miscommunication and rework.
- Delivered the final accountability report on time and transparently.

Projects

Production Planning & Control System, Razer Basilisk Wireless Mouse (2026)

- Forecast monthly demand so the factory builds what customers will actually buy, avoiding unsold stock.
- Planned materials (MRP) and a Kanban system so parts arrive just in time: less cash tied up, no shortages.
- Scheduled machines so work flows between stations without waiting, finishing orders faster (Excel, LINGO).

Factory Layout Design, OneWave Reusable Bottle (2026)

- Placed machines in process order so materials travel shorter routes and production runs faster.
- Sized each area, from production to storage and offices, so floor space is used efficiently.
- Separated paths for people, forklifts, and machines to cut accident risk and costly stoppages.

HydroCarry Ergonomic Fire Extinguisher, Human Integrated System (2025)

- Redesigned a fire extinguisher with wheels, an adjustable strap, and a grip sized to its users.
- Made it easier to move so help arrives faster and users avoid back and shoulder strain.
- Tested comfort and risks with user surveys, turning hazards into safer operating steps.

Exam Score Drivers, Data Analysis Project (2026)

- Analyzed 20,000 student records to show which habits drive scores, with study time the strongest.
- Built a prediction model that flags at-risk students before exams, so help comes early.
- Turned findings into clear recommendations so support goes where it has the most impact (Python, RStudio).

Skills & Languages

- **Operations & Supply Chain**: demand forecasting, production planning (MPS, MRP), inventory control, machine scheduling, facility layout
- **Business & Data Analysis**: data analysis and visualization, business process mapping, service blueprint, ergonomics and work risk analysis
- **Tools**: Microsoft Excel, Word, PowerPoint, Python, RStudio, LINGO, Autodesk Inventor, Arduino IDE
- **Languages**: Indonesian (native), English (professional working proficiency)
